Sequence 288, Application US/08292620A

Patent No. 583784710M:
APPLICANT: Susan Grimm
APPLICANT: James McSwiggen
APPLICANT: Sean Sullivan
APPLICANT: Sean Sullivan
APPLICANT: Memeth G. Draper
ITILE OF INVENTION: RIBOZNET REATMENT OF
ITILE OF INVENTION: RIBOZNET CONDITIONS
ITILE OF INVENTION: RELATED TO LEVELS OF
ITILE OF INVENTION: MCLECULE-1 (I-CAM-1)

NUMBER OF SEQUENCES: 2390

CORRESONDENCE ADDRESS:
                  TELEPANE: (213) 489-1600
TELEFAX: (213) 955-0440
TELEFAX: 67-3510
INFORMATION FOR SEQ ID NO: 121:
SEQUENCE CHARACTERISTICS:
LENGTH: 15 base pairs
TYPE: nucleic acid
STRANDEDNESS: single
TOPOLOGY: linear
US-08-292-620A-121
                                                                                                                                                                                                                                                                                                                                                                                                                                                                 901 CTGGTCATTTTCT 913
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        13 Credenaririer 1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ò

US-08-173-489C-142
| Sequence 1142 Application US/08173489C
| Patent NO. 5861244
| GENERAL INFORMATION:
| APPLICANT: MEDBURN, A. G.
| TITLE OF INVENTION: GENETIC SEQUENCE ASSAY USING DNA
| TITLE OF INVENTION: TRIPLE-STRAND FORMATION.
| NUMBER OF SEQUENCES: 365
| CORRESPONDENCE ADDRESS:
| ADDRESSEE: PROFILE DIAGNOSTIC SCIENCES, INC.,
| STREET: SIO EAST 73RD STREET,
| CITY: NEW YORK.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   CONTEXT: USA
ZIP: 94111
COMPUTER READABLE FORM:
MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: PatentIn Release #1.0, Version #1.25
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/441,887A

US-09-346-551-4

Sequence 4, Application US/09346551B

Patent No. 0.6361945

GENERAL INFORMATION:
APPLICANT: BECKER, Michael M.
APPLICANT: SCHENCH, GATY P.
TITLE OF INVENTION: WOLECULAR TORCHES
FILE REFERENCE: GP098-02.UT

CURRENT FILING DATE: 1999-07-01

EARLIER APPLICATION NUMBER: US 60/091,616

EARLIER FILING DATE: 1998-07-02

NUMBER OF SEQ ID NOS: 9

SOFTWARE: PatentIn Ver: 2.0

SEQ ID NO 4

LENGTH: 15

TUNDE DENGTH: 15
TITLE OF INVENTION: CONDITIONS RELATED TO TITLE OF INVENTION: OF VASCULAR ENDOTHEL.

TITLE OF INVENTION: OF VASCULAR ENDOTHEL.

TITLE OF INVENTION: GROWTH FACTOR
NUMBER OF SEQUENCES: 8502
CORRESPONDENCE ADDRESS:
ADDRESSEE: Lyon & Lyon
STREET: 633 West Fifth Street
STREET: Suite 4700
CITY: Los Angeles
STATE: California
COUNTRY: U.S.A.
ZIP: 90071-2066
COMPUTEN FRADABLE FORM:
MEDIUM TYPE: 3.5" Diskette, 1.44 Mb
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      COMPUTER: IBM Compatible

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 US-08-13-489C-165/c
| Sequence 165, Application US/08173489C
| Patent No. 5861244
| GENERAL INFORMATION:
| APPLICANT: MANG, C. -G.
| APPLICANT: HEPBURN, A. G.
| TITLE OF INVENTION: GENERIC SEQUENCE ASSAY USING DNA-
| TITLE OF INVENTION: TRIPLE-STRAND FORMATION.
| NUMBER OF SEQUENCES: 365
| CORRESPONDENCE ADDRESS:
| ADDRESSEE: SLO EAST 73RD STREET,
| CITY: NEW YORK |

MOLECULE TYPE: genomic DNA
DESCRIPTION: hepatitis B virus ayw isolate,
DESCRIPTION: nucleotides 2750 to 2761
HYPOTHERICAL: no
ANTI-SENSE: no
ORIGINAL SOURCE::::: D virus

VOLUME: 2
```

```
TOPOLOGY: linear
MOLECULE TYPE: genomic DNA
DESCRIPTION: 23s rRNA gene from Leptospira
DESCRIPTION: interrogans (Accession # X14249) nucleotides
DESCRIPTION: mterrogans (Accession # X14249) nucleotides
DESCRIPTION: 842 to 853
HYPOTHERICAL: no
ANTI-SENSE: no
ORIGINAL SOURCE:
ORIGINAL Multon:
TITLE: Nucleotide sequence of a 23s
TITLE: ribosomal RNA gene for Leptospira interrogans
TITLE: serovar canicola strain moulton
JOUGNAL: Nucleic Acids Research

MOLECULE TYPE: genomic DNA
DESCRIPTION: 23s rRNA gene from Halococcus morrhuae
DESCRIPTION: (Accession # X05481) nucleotides 880 to 891
HYPOTHETICAL: no
ANTI-SENSE: no
ORIGINAL SOURCE:
ORGANISM: Halococcus morrhuae
PUBLICATION INFORMATION:
AUTHORS: Leffers, H. Kjems, J, Ostergaard, L,
AUTHORS: Larsen, N, Garrett, R.A.

TELECOMMUNICATION INFORMATION:
TELEFAX: (attorney) (212) 246-8959
TELEFAX: (attorney) (212) 246-8959
INFORMATION FOR SEQ ID NO: 259:
SEQUENCE CHARACTERISTICS:
LENGTH: 12 base pairs
TYPE: nucleic acid
STRANDEDNESS: double stranded
TOPOLOGY: linear
MOLECULE TYPE: genomic DNA
DESCRIPTION: 23s TRRA gene from Frankia sp
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        RESULT 262

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Sequence 2. Application US/09359921
| Patent No. 6545162
| GENERAL INFORMATION:
| APPLICANT: DERVAN, PETER B.
| APPLICANT: DERVAN, PETER B.
| TITLE OF INVENTION: METHOD FOR THE SYNTHESIS OF PYRROLE AND IMIDAZOLE
| TITLE OF INVENTION: CARBOXAMIDES ON A SOLID SUPPORT
| TITLE OF INVENTION: CARBOXAMIDES ON A SOLID SUPPORT
| FILE REFERENCE: 025099-1602
| CURRENT APPLICATION NUMBER: US/09/359,921
| CURRENT FILING DATE: 1999-07-22
| NUMBER OF SEQ ID NOS: 31
| SOFTWARE: Patentin Ver. 2.1
| SEQ ID NO 2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  APPLICANT: SOUTHERN, EDWIN

TITLE OF INVENTION: A METHOD FOR ANALYSING A POLYNUCLEOTIDE CONTAINING A TITLE OF INVENTION: OMALABLE SEQUENCE AND A SET OR ARRAY OF TITLE OF INVENTION: OLIGONUCLEOTIDES THEREFOR (AS AMENDED)

FILE REFERENCE: 97-1173*/wmc/263

MOLECULE TYPE: Genomic DNA
DESCRIPTION: esterase D gene (Accession # M13450)
DESCRIPTION: nucleotides 710 to 719
HYPOTHETICAL: No
ANTI-SENSE: No
ORIGINAL: SOURCE:
ORGANISM: Homo sapiens
POSITION IN GENOME:
CHROWOSOME/SEGRENT: chromosome 13
MAP POSITION: 13q14.1-q14.2
PUBLICATION INFORMATION:
AUTHORS: Lee, E Y H P, Lee, W H.
TITLE: Molecular cloning of the
TITLE: Molecular cloning of the
TITLE: Letinoblastoma

Patent No. 6458945
GENERAL INFORMATION:
APPLICANT: Variagenics, Inc.
TITLE OF INVENTION: A Method for Analyzing Polynucleotides
FILE REFERENCE: 258/239
CURRENT APPLICATION NUMBER: US/09/709,596A
CURRENT FILING DATE: 2002-02-21
NUMBER OF SEQ ID NOS: 17
SOFTWARE: Patentin version 3.1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        APPLICANT: Variagenics, Inc.
TITLE OF INVENTION: A Method for Identifying Polymorphisms

US-10-14-818-7

i Sequence 7, Application US/10104818

Patent No. 658223

GENERAL INFORMATION:

APPLICANT: VARIGON: A Method for Analyzing Polynucleotides

TITLE OF INVENTION: A Method for Analyzing Polynucleotides

TITLE OF INVENTION: A Method for Analyzing Polynucleotides

CURRENT APPLICATION NUMBER: US/10/104,818

CURRENT FILING DATE: 2092-05-14

PRIOR APPLICATION NUMBER: 09/394,774

NUMBER OF SEQ ID NOS: 16

SOFTWARE: PatentIn Version 3.1
